SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	04/18/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

# Office Action Summary

Application No.

09/881,788

Applicant(s)

KIANIAN, SOHRAB

Examiner

FIRMIN BACKER

Art Unit

3621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 22 January 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-4, 7-16 and 18-31 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-4, 7-16 and 18-31 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments with respect to claims 1-4, 7-16 and 18-31 have been considered but are moot in view of the new ground(s) of rejection.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4, 7-16 and 18-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nobakht et al (U.S. Patent No. 7,111,051 B1) in view of Zhao et al (U.S. Patent No. 6,496,950).

4. As per claims 1, 3, 10, 14, Nobakht et al teach a memory card wallet that store one or both user information and user passwords corresponding to websites or card readers the memory card wallet comprising: an interface for receiving a server identifier from a host computer a content addressable memory (*smart card*, 232) having a data structure comprising at least one entry, each entry having at least one searchable field and at least one nonsearchable field, the searchable field storing one of the at least one pre-determined server identifier, the non-

Art Unit: 3621

searchable field storing the user information associated with a corresponding at least one pre-determined server identifier and for determining whether there is a match or a partial match between the received server identifier and one of the at least one pre-accessing the content addressable memory to determine server identifier and for providing the user information associated with the matching pre-determined server identifier (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*). Nobakht et al fail to teach a controller coupled to the interface and the content addressable memory including processing components to read program and erase the content addressable memory. However, Zhao et al teach a controller coupled to the interface and the content addressable memory including processing components to read program and erase the content addressable memory (*see claims 1 and 6*). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Nobakht et al's system to include Zhao et al's a controller coupled to the interface and the content addressable memory including processing components to read program and erase the content addressable memory because this would have improved the efficiency of the content addressable memory system.

5. As per claims 2, Nobakht et al teach a memory card wallet wherein the memory card wallet further stores a user password, and the controller enables the providing user information associated with the matching pre-determined server identifier in the event that a received password matches the stored user password (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*).

6. As per claims 4, 15, Nobakht et al teach a memory card wallet wherein the server identifier is a website address and the user information includes a user identifier and an authorization code associated with the website address (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*).

7. As per claims 16, Nobakht et al teach a memory card wallet wherein the memory has a data structure comprising at least one entry, each entry having at least one searchable field and at least one nonsearchable field, the searchable field storing one of the at least one pre-determined server identifier, the non-searchable field storing the user information associated with a corresponding at least one pre-determined server identifier (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*).

8. As per claims 7, 18, Nobakht et al teach a memory card wallet wherein the controller stores user information in the content addressable memory in the event that there is not a match between the received server identifier and any of the at least one pre-determined server identifiers (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*).

9. As per claims 8, 19, Nobakht et al teach a memory card wallet wherein the controller erases the at least one pre-determined server identifier and the user information associated with the at least one pre-determined server identifier in response to an erase command from server associated with the received server identifier (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*).

10. As per claims 9, 20, Nobakht et al teach a memory card wallet wherein the controller erases the at least one pre-determined server identifier and the user information associated with the at least one pre-determined server identifier in response to an erase command from a server associated with the received server identifier, the erase command being generated in response to a user command provided to the server prior to an access corresponding to the server identifier (*see abstract, figs 1, 2, 3, summary of the invention , col. 4 lines 21-6 line 30*).

11. As per claims 11, Nobakht et al teach a method further comprising providing an indication in the event that the received server identifier does not match any stored pre-selected server identifier (*see abstract, figs 1, 2, 3, summary of the invention , col. 4 lines 21-6 line 30*).

12. As per claims 12, Nobakht et al teach a method further comprising disabling access the user information stored in the memory card wallet in the event that the received server identifier does not match any stored pre-selected server identifier (*see abstract, figs 1, 2, 3, summary of the invention , col. 4 lines 21-6 line 30*).

13. As per claims 13, Nobakht et al teach a method wherein the providing user information further comprises enabling the providing user information associated with the matching pre-selected server identifier in the event that a received password matches a user password stored in the memory (*see abstract, figs 1, 2, 3, summary of the invention , col. 4 lines 21-6 line 30*).

14. As per claims 21, Nobakht et al teach a method further comprising determining whether there is a match between a received password and a user password stored in the memory card wallet and disabling access to the stored information in the memory card wallet in the event there is not a match, and allowing access to the stored information in the memory card wallet in the event there is a match ((see abstract, figs 1, 2, 3, summary of the invention , col. 4 lines 21-6 line 30).

15. As per claims 22, Nobakht et al teach a method comprising receiving a memory card wallet that store one or both user information and user passwords corresponding to websites or card readers the memory card wallet by a host; receiving at the host a user-selected website address; accessing from the host a website associated with the user-selected website address; receiving an identifier from the accessed website at the host and providing the received identifier to the memory card wallet; and providing information corresponding to the identifier from the memory card wallet to the host in the event that determine there is a match between the received identifier and a pre-determined identifier stored in the memory card wallet (see abstract, figs 1, 2, 3, summary of the invention , col. 4 lines 21-6 line 30). Nobakht et al fail to teach a controller coupled to the interface and the content addressable memory including processing components to read program and erase the content addressable memory. However, Zhao et al teach a controller coupled to the interface and the content addressable memory including processing components to read program and erase the content addressable memory (see claims 1 and 6). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Nobakht et al's system to include Zhao et al's a controller coupled to the interface and

Art Unit: 3621

the content addressable memory including processing components to read program and erase the content addressable memory because this would have improved the efficiency of the content addressable memory system.

16. As per claims 23, Nobakht et al teach a method wherein the information in the memory card wallet includes a user identification or password associated with the accessed website (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*).

17. As per claims 24, Nobakht et al teach a method further comprising: after receiving the inserted memory card into a host, requesting a password from the user; determining whether there is a match between the received password and a user password stored in the memory card wallet; allowing access to the information in the memory card wallet in the event that there is a determined match; and denying access in the event that there is no match (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*).

18. As per claims 25, Nobakht et al teach a method further comprising: providing a request to store the received identifier in the event that there is not a match between the received identifier and any of the pre-determined identifier stored in the memory card wallet; providing a request for user to provide user information associated with such received identifier; and storing the user information and the received identifier in the memory card wallet (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*).

Art Unit: 3621

19. As per claims 26, Nobakht et al teach a method further comprising: deleting the pre-determined identifier matching the received identifier and information corresponding to the pre-determined identifier in response to a delete command (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*).

20. As per claims 27, Nobakht et al teach a method further comprising: generating the delete command in response to a user command provided to the accessed website at a time prior to accessing the user selected website address (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*).

21. As per claims 28 and 30, Nobakht et al teach a system comprising: a communication network; a server coupled to the communication network and providing a prompt in response to a user request and allowing access to a portion of a resource in response to a match between authorization request information and a predetermined authorization code; a memory card wallet including a controller and content addressable memory that store one or both user information and user passwords corresponding to websites or card readers the memory card wallet storing a server identifier and authorization request information associated with at least one server and providing the authorization request information in response to server determine there is a match between the user request and the server identifier stored in the memory card wallet server identifier stored in said memory card wallet. and providing said authorization request information in the event that the memory card wallet determines said match; and; and a host computer coupled to the communication network and providing the user request in response to a

Art Unit: 3621

user input (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*).

Nobakht et al fail to teach a controller coupled to the interface and the content addressable memory including processing components to read program and erase the content addressable memory. However, Zhao et al teach a controller coupled to the interface and the content addressable memory including processing components to read program and erase the content addressable memory (*see claims 1 and 6*). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Nobakht et al's system to include Zhao et al's a controller coupled to the interface and the content addressable memory including processing components to read program and erase the content addressable memory because this would have improved the efficiency of the content addressable memory system.

22. As per claims 29 and 31, Nobakht et al teach a method comprising: receiving at a client computer a first user-selected identifier; providing the first user-selected identifier to a server and a memory card wallet that store one or both user information and user passwords corresponding to websites or card readers the memory card wallet; providing from the server a request for a second user-selected identifier; providing from the memory card wallet the second user-selected identifier in the event that the first user-selected identifier determine there is a matches a stored entry in the memory card wallet (*see abstract, figs 1, 2, 3, summary of the invention, col. 4 lines 21-6 line 30*). Nobakht et al fail to teach a controller coupled to the interface and the content addressable memory including processing components to read program and erase the content addressable memory. However, Zhao et al teach a controller coupled to the interface and the content addressable memory including processing components to read program and erase the

content addressable memory (*see claims 1 and 6*). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Nobakhrt et al's system to include Zhao et al's a controller coupled to the interface and the content addressable memory including processing components to read program and erase the content addressable memory because this would have improved the efficiency of the content addressable memory system.

### ***Conclusion***

23. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. (*see form 892*).

24. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
